-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The disclosure is objected to because of the following informalities: Please update related application information on the first page of the specification.

Appropriate correction is required.

Allowable Subject Matter

3. Claims 13-17,23-30,33-36,38,39,41,42 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:

As per the objected to claims as noted above, the claim limitations pertaining to the relationship between ancestral nodes, content nodes, and search keywords, is not explicitly taught by the prior art of record.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 11,12,18-22,31,32,37,40,54-57 are rejected under 35 U.S.C. 102(e) as being anticipated by Gould et al (6839669).

As per claims 11,12,18-22,31,32,37,40, and 54-57, Gould et al (6839669) teaches a system and method employing nodes representing content in a voice command/voice text processing system (as command/speech parser – fig. 14, subblock 385; col. 7 lines 15-30; col. 8 lines 14-22) using a multiple node structure (col. 39 lines 58-62) wherein the node structure determines if the keyword is not a match (col. 39 lines 62-67 – the ‘no-word-arc’ detects a situation where there is no content), an arc considered as removing or deleting unnecessary words before the correct content word is detected (col. 40 lines 20-30), as well as removing unnecessary word after the correct content word (col. 40 lines 44-45). The nodes themselves are used in a relational structure, wherein the relationship between the content of more than one word is evaluated (the double and triple self loop – col. 40 lines 55-63 → in this example, the relationship between the day of the week and the actual date is evaluated; Gould et al (6839669) also teaches other content evaluated

Art Unit: 2626

relationships – col. 41 lines 25-67). Gould et al (6839669) also teaches scoring to evaluate the relative content of the speech command, as well (col. 42 lines 3-55). In cols.43-50 of Gould et al (6839669), examples are shown of different detectable contents based on a particular situation (e.g. – setting of appointments, task, notes, emails, etc.). Cols. 51- 57 detail and example of how an utterance/command is processed, with the detailed scoring of the node relationships as mentioned above.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please see related art listed on the PTO-892 form.
